

ColorGraz MX4 Powercore

Exterior premium LED wall grazing luminaires with extended color range

ColorGrazе MX4 Powercore

Exterior premium LED wall grazing luminaires with extended color range

The new ColorGrazе MX4 Powercore family extends the range and flexibility of the popular line of high-performance, full-color LED grazing luminaires from Philips Color Kinetics. These intelligent RGBW or RGBA luminaires offer an expanded palette of intensely saturated full-color light output in a variety of beam angles. Low-profile housing, connectorized cabling, a universal power input range, and direct line-voltage operation make ColorGrazе MX4 Powercore luminaires easy to install and operate. Custom lengths, LED channels, beam angles, housing colors, and power consumption levels produce hundreds of possible configurations and light distribution patterns to support virtually any façade or surface illumination application.

- Tailor light output to specific applications — Available in four standard lengths, with standard 9° x 9°, 10° x 60°, 15° x 30°, 30° x 60° and 60° x 30° beam angles. Individually addressable 305 mm (1 ft) segments accommodate fine control of color-changing effects and pre-programmed light shows.
- High-performance illumination and beam quality — ColorGrazе MX4 Powercore delivers well over 500 lumens of color-changing light per foot. Superior beam quality offers striation-free saturation for several feet from luminaire placement with no visible light scalloping between luminaires.
- Flexible color control — Channels of amber or neutral white LEDs seamlessly blend with channels of red, green, and blue LEDs to produce a significantly expanded color palette. In addition to the millions of saturated colors achievable with standard RGB lighting luminaires, ColorGrazе MX4 Powercore RGBW luminaires produce an extended range of subtle pastel colors, while RGBA luminaires create vibrant golds and intense yellows that are more difficult to obtain on standard RGB luminaires.
- Integrates Powercore technology — Powercore technology rapidly, efficiently, and accurately controls power output to luminaires directly from line voltage. The Philips Data Enabler Pro merges line voltage with control and delivers them to the luminaire over a single standard cable, dramatically simplifying installation and lowering total system cost.
- Versatile installation options — Convenient push-and-click connectors let you easily and rapidly install Leader Cables and Jumper Cables. Multiple cable lengths support a variety of layouts. Constant torque locking hinges offer simple and consistent position control from various angles. The low-profile aluminium housing accommodates placement within most architectural niches.
- Superior color consistency and accuracy — Optibin, an advanced binning algorithm, sets a new standard for the color consistency and uniformity of LED sources used in manufacturing. Chromasync technology achieves unprecedented consistency of light performance and color precision across multiple luminaires in an installation, while maximizing intensity and color range.
- Industry-leading controls — Luminaires work seamlessly with the complete Philips line of controllers, including Light System Manager, iPlayer 3, and ColorDial Pro, as well as third-party controllers.
- Universal power input range — Luminaires accept a universal power input range of 100 to 277 VAC for consistent installation anywhere in the world.
- Custom configurations for special applications — Create custom configurations to support special applications by exchanging the LED sources in any channel. Options include white LED color temperatures ranging from 2700 K to 6500 K, Blue, Green, Amber, and Red. 60° x 60° and 90° x 60° beam angles also available. See the ColorGrazе MX4 Powercore Ordering Information specification sheet for complete details.

High performance + easy installation

With flexible mounting options, multiple luminaire length and beam angle options, integrated Powercore technology, and a discreet low-profile housing rated for use in outdoor locations,

Photometrics/ColorGraz MX4 Powercore, RGBW

Photometric data is based on test results from an independent NIST traceable testing lab. IES data is available at www.philipscolorkinetics.com/support/ies.

	Mounting	Multi-positional, constant torque locking hinges				
	Temperature	-40 to 50 °C (-40 to 122 °F) Operating -20 to 50 °C (-4 to 122 °F) Startup -40 to 80 °C (-40 to 176 °F) Storage				
	Mechanical Impact	IK10				
	Humidity	0 to 95%, non-condensing				
	Vibration Resistance♣	Complies with ANSI C136.31				
	Luminaire Run Lengths	To calculate luminaire run lengths and total power consumption for your specific installation, download the Configuration Calculator from www.philipscolorkinetics.com/support/install_tool/				
Certification and Safety	Certification	UL/cUL, FCC Class A, CE, PSE, CQC, C-Tick				
	Environment	Dry/Damp/Wet Location, IP66				

* 305 mm (1 ft) lumen output measurements comply with IES LM-79-08 testing procedures. 610 mm (2 ft), 914 mm (3 ft), and 1219 mm (4 ft) measurements are estimated based on the 305 mm (1 ft) measurements.

† L70 = 70% lumen maintenance (when light output drops below 70% of initial output). L50 = 50% lumen maintenance (when light output drops below 50% of initial output). Ambient luminaire temperatures specified. Lumen maintenance calculations are based on lifetime prediction graphs supplied by LED source manufacturers. Calculations for white-light LED luminaires are based on measurements that comply with IES LM-80-08 testing procedures. Refer to www.philipscolorkinetics.com/support/appnotes/lm-80-08.pdf for more information.

♣ ColorGrazе 305 mm (1 ft) and 610 mm (2 ft) luminaire models conform to ANSI C136.31 roadway and area lighting luminaire vibration standards. ColorGrazе 914 mm (3 ft) and 1219 mm (4 ft) luminaires can be customized for conformance. Please contact your Philips Color Kinetics Lighting Sales group for custom configurations.

Custom Configurations

In addition to the standard configurations listed in this Product Guide, custom configurations are also available with non-standard options. See the ColorGraz MX4 Powercore Ordering Information sheet at www.philipscolorkinetics.com/ls/rgb/colorgraze-mx4-powercore/ for complete details.

Component	Available Non-Standard Options
LED Sources	Any combination of Red, Green, Blue, Royal Blue, Amber, 2700 K, 3000 K, 3500 K, 4000 K, 5700 K, and 6500 K
Housing Color	Choice of any RAL CLASSIC color except white
Beam Angle*	60° x 60°, 90° x 60°
Power Consumption	Factory-set custom power consumption levels

Luminaires and Accessories

ColorGraz MX4 Powercore luminaires are part of a complete system which includes:

- One or more Data Enabler Pro devices
- Any Philips controller, including Light System Manager, iPlayer 3, and ColorDial Pro, or a third-party controller
- Leader Cables to connect the first luminaire in each series to a Data Enabler Pro
- Optional Jumper Cables to add space between luminaires in a series, if necessary
- 3 + ground copper wire to connect Data Enabler Pro devices to a common junction box, if installing luminaires in parallel. Standard 2.05 mm (12 AWG) stranded wire is recommended.

Dimensions

Installation

The ColorGraz MX4 Powercore family extends the range and flexibility of the popular line of high-performance, full-color LED grazing luminaires from Philips Color Kinetics. These intelligent RGBW or RGBA luminaires offer an expanded palette of intensely saturated full-color light output in a variety of beam angles.

Owner/User Responsibilities

It is the responsibility of the contractor, installer, purchaser, owner, and user to install, maintain, and operate ColorGraz MX4 Powercore luminaires in such a manner as to comply with all applicable codes, state and local laws, ordinances, and regulations. Consult with the appropriate electrical inspector to ensure compliance.

Installing in Damp or Wet Locations

When installing in damp or wet locations, seal all Data Enabler Pro devices and junction boxes with electronics-grade RTV silicone sealant so that water or moisture cannot enter or accumulate in wiring compartments, cables, or other electrical parts. Use suitable outdoor-rated junction boxes when installing in damp or wet locations. Additionally, use gaskets, clamps, and other parts required for installation to comply with all applicable local and national codes.

Prepare for the Installation

1. Refer to the lighting design plan, architectural diagram, or other diagram that shows the physical layout of the installation to identify the locations of all switches, controllers, Data Enabler Pro devices, luminaires, and cables.
2. ColorGraz MX4 Powercore luminaires can be installed in series or in parallel (wired to a common junction box). The maximum number of luminaires each Data Enabler Pro can support depends on specific configuration details such as luminaire length, luminaire spacing, circuit size, line voltage, and leader cable length. For more information, and for help calculating the number of luminaires your specific installation can support, download the Configuration Calculator from www.philipscolorkinetics.com/support/install_tool/, or consult Application Engineering Services at support@colorkinetics.com.

In addition to maximum luminaire run lengths determined by the electrical configuration, each Data Enabler Pro imposes maximum run lengths based on data integrity. To ensure data integrity, maximum individual run lengths should not exceed 53.3 m (175 ft), and the total cable length per Data Enabler Pro should not exceed 122 m (400 ft).

✱ Refer to the ColorGraz MX4 Powercore Installation Instructions for specific warning and caution statements.

✱ Clean the lens with water and mild detergent using a soft cleaning cloth, and wipe dry. Because they will scratch, soften, pit, haze, yellow, mar, or crack the lens, do not use paper towels, abrasive cleaning products, window cleaners, or cleaning solutions containing chemicals such as ammonia, sodium hydroxide, and isopropyl alcohol.

Start the Installation

1. Install all Data Enabler Pro devices, including any interfaces with controllers. Data Enabler Pro devices and external controllers send power and control signals to luminaires over Leader Cables. Jumper Cables are required to connect luminaires together in series.
2. Verify that all additional supporting equipment (switches, controllers) is in place.
3. Ensure that all additional parts and tools are available, including:
 - The included mounting hinges and hardware
 - 2 mm, 2.5 mm, and 4 mm hex key wrenches
 - 5 mm (1/4 in) socket cap fasteners, anchors, or screws for surface mounting
 - 3 + ground copper wire, as needed. Standard 12 AWG (2.05 mm) stranded wire is recommended.
 - Junction boxes, as needed, rated for your application. (Refer to the manufacturer's literature for additional items required for mounting or sealing.)
 - Electronics-grade room temperature vulcanizing (RTV) silicone sealant, as needed

 Refer to the Data Enabler Pro Installation Instructions or Product Guide for guidelines on configuring and positioning the Data Enabler Pro in relation to the controller.

Unpack and Prepare Luminaires

1. Carefully inspect the box containing ColorGraze MX4 Powercore and the contents for any damage that may have occurred in transit.
2. ColorGraze MX4 Powercore luminaires are addressable in 305 mm (1 ft) segments. This feature allows playback controllers to send unique light output data to each segment of each luminaire within your installation.

Each luminaire segment, or LED node, comes pre-programmed with a unique serial number. Each luminaire has from one to four serial numbers, depending on its length. As you unpack the luminaires, record the serial numbers in a layout grid (typically a spreadsheet or list) for easy reference and light addressing.

3. Assign each luminaire to a position in the lighting design plan.
4. To streamline installation and aid in light address programming, you can affix a weatherproof label identifying the order or placement in the installation to an inconspicuous location on each luminaire's housing.

Included in the box

ColorGraze MX4 Powercore luminaire
(1) or (2) Mounting hinges
(2) or (4) M5, 15 mm stainless steel hex bolts for hinge installation
Installation Instructions

Mount and Connect Luminaires

Make sure the power is OFF before mounting and connecting ColorGraz MX4 Powercore luminaires.

ColorGraz MX4 Powercore luminaires offer bulkhead connectors that accept the ColorGraz MX4 Powercore pre-configured Leader and Jumper Cables. Because they have a male connector on one end of the luminaire and a female connector on the other end, ColorGraz MX4 Powercore luminaires are directional, and must all be oriented in the same direction.

Mount Luminaires

- Using the included 4 mm hex hardware, attach two hinges to each luminaire. There are three possible methods for attaching hinges to the luminaires, each method offering differing degrees of swing radius and space-efficiency. Select the method most suitable for your application.

- If installing ColorGraz MX4 Powercore luminaires in parallel, mount junction boxes in accordance with the lighting design plan.
- When installing a linear series of ColorGraz MX4 Powercore luminaires, make sure that all luminaires are oriented in the same direction. The white connectors are for cable inputs, and the black connectors are for cable outputs. The Leader Cable connects to the male bulkhead connector on the first luminaire in each series.

4. Rotate the luminaire hinge assemblies into the desired positions. For consistent position control, use the indicators on the side of each hinge knuckle for reference. Use a 2 mm hex key wrench to loosen the set screws, as needed.
5. To accommodate installation from various angles, each hinge has four set screws designed to lock the hinge position. All four, or only two, of the set screws may be used, depending on the mounting method and swing radius you select for the hinge. For example, if the hinge leaves are to be fully closed, the interior set screws may not be accessible.

Do not lock the hinges' positions at this time; the hinges have a built-in constant torque feature that allows temporary positioning. For optimal light output performance, aim and lock the hinges following installation.

Make Cable Connections

1. Connect Leader Cables:

- If installing luminaires in series, run a 3 m (10 ft) or 15.2 m (50 ft) Leader Cable from a Data Enabler Pro device to the input side of the first luminaire in the series. Push the Leader Cable into the connector to lock it into place.
- If installing luminaires in parallel, run 3 + ground copper wire from a Data Enabler Pro device to a common junction box.

Run Leader Cables from the common junction box to the input side of the first luminaire in each series. Push the Leader Cables into the connectors to lock them into place.

Within the common junction box, use wire nuts to connect line, neutral, ground, and data wires. Tuck wire connections into the junction box.

Secure all junction box covers. If installing in a damp or wet location, seal all junction boxes and points of entry with contractor-grade RTV silicone sealant. Use gaskets, clamps, and other parts and fittings required to comply with local outdoor wiring codes.

2. Connect all Jumper Cables between luminaires. Push the cable ends into the connectors to lock them into place.
3. Insert a terminator into the output side of the last luminaire in each series. (Terminators are provided with the ColorGraze MX4 Powercore Leader Cables.)

Minimum distance between luminaires

***** Be sure to position luminaires close enough together so that Leader Cables and Jumper Cables are not stretched or taut when installed.

Leader Cable Connector Dimensions

UL/cUL

CE/PSE

Make Power Connections

Once you've made all luminaire and junction box connections, connect the flying leads from a Leader Cable or 3 + ground wire from a common junction box to the 4-wire PC terminal connector block inside the Data Enabler Pro Housing.

Address and Configure the Luminaires

Power/data output to luminaires

Mains voltage output

* Refer to the Data Enabler Pro Product Guide for comprehensive installation and configuration instructions. You can view or download the guide from www.philipscolorkinetics.com/ls/pds/dataenablerpro

Make sure the power is ON before addressing and configuring luminaires.

To allow a fine level of control, ColorGraze MX4 Powercore luminaires are addressable in 305 mm (1 ft) segments, or *nodes*. ColorGraze MX4 Powercore luminaires have one, two, three, or four nodes, depending on luminaire length, each identified by a unique serial number.

ColorGraze MX4 Powercore luminaires operate in 8-bit mode by default. You can configure ColorGraze MX4 Powercore to operate in 16-bit mode, which increases luminaire resolution for smoother dimming and more precise color control.

In 8-bit mode, luminaire nodes use one DMX address per LED channel (red, green, blue and white or amber). In 16-bit mode, luminaire nodes use two DMX addresses per LED channel. The first DMX address corresponds to the “coarse” data for that channel, and the second corresponds to the “fine” data. By using double the number of DMX addresses, 16-bit mode increases luminaire resolution from 256 dimming steps to 65,536 (256 x 256) dimming steps.

DMX Channel Assignments

	1		2		3		4	
8-Bit Mode	Red		Green		Blue		White or Amber	
16-Bit Mode	1	2	3	4	5	6	7	8
	Red Coarse	Red Fine	Green Coarse	Green Fine	Blue Coarse	Blue Fine	White or Amber Coarse	White or Amber Fine

* You can address luminaires and switch between 8-bit mode and 16-bit mode using QuickPlay Pro. You can download QuickPlay Pro from www.philipscolorkinetics.com/support/addressing/

Each 305 mm (1 ft) ColorGraze MX4 Powercore node comes factory-addressed with a starting DMX address of 1. For lighting designs where luminaire nodes work in unison, all nodes can be assigned the same DMX addresses. Changes to the default addresses are not necessary, but if nodes were previously readdressed for use in other installations, you must reset them. For light show designs that show different colors on different nodes simultaneously, you must assign unique DMX addresses to your nodes and sort them in a useful order.

- In Ethernet installations, you can address and configure luminaire nodes using QuickPlay Pro with a computer connected to your lighting installation's network. QuickPlay Pro can automatically discover all luminaire nodes, controllers, and Data Enabler Pro devices for quick configuration.
- In DMX installations, you can address and configure luminaire nodes using QuickPlay Pro with iPlayer 3 or SmartJack Pro. You can manually enter luminaire node serial numbers, or you can import a spreadsheet listing each luminaire node's serial number and starting DMX address.

For details on addressing and configuring luminaires, controllers, and power/data supplies with QuickPlay Pro, refer to the *Addressing and Configuration Guide*, which you can view or download at www.philipscolorkinetics.com/support/addressing.

Setting Luminaire Dimming Curves

Dimming curves describe how slowly or quickly a luminaire dims at different levels of input. For finer control, ColorGraz MX4 Powercore offers three different dimming curves for use in different situations and applications:

- **Normal**
The non-linear (gamma) dimming curve used in most Philips Color Kinetics LED lighting luminaires. ColorGraz MX4 Powercore luminaires use the normal dimming curve by default.
- **Linear**
A dimming curve with a linear relationship between power input and DMX output.
- **Tungsten**
A non-linear dimming curve that emulates the dimming curve of incandescent lamps on a DMX dimmer. This curve offers the most control at low intensities.

Setting LED Transition Speed

Normally, LEDs react to DMX or other control data instantaneously. In some cases, you may want to slow down the reaction speed to achieve smoother transitions when the intensity of different LED channels changes. ColorGraz MX4 Powercore offers five levels of decreasing LED transition speed, from Fast (instant snap changes) to Delay-4 (slowest transition speed).

Chromasync: Maximizing Luminaire-to-Luminaire Consistency

Optibin, our advanced binning algorithm, sets an industry-leading standard for the color consistency and uniformity of LED sources used in manufacturing. Chromasync technology enhances the performance of Optibin by maximizing luminaire-to-luminaire color consistency within an installation. By using active measurements of each luminaire's color range taken during manufacturing, Chromasync achieves a common gamut for all ColorGraz MX4 Powercore luminaires, regardless of LED sources used or date of manufacture.

Chromasync is especially valuable in lighting designs that feature combinations of two or more saturated colors (RGB white, yellow, cyan, and so on). In the case of RGB white, for example, Chromasync can reduce color variations across ColorGraz MX4 Powercore luminaires from 10 or more MacAdam ellipse steps to as little as four MacAdam ellipse steps.

While Chromasync does not calibrate colors with an external reference or standard, it accelerates commissioning of systems by eliminating the need for tedious fine-tuning of individual luminaires.

✳ You can download QuickPlay Pro from www.philipscolorkinetics.com/support/addressing.

✳ You will need the layout grid that you created when you recorded the serial numbers of the light luminaires in your installation.

✳ Note that Chromasync achieves a common gamut at the expense of some intensity of output — from a negligible loss to 10% or more, depending on color.

Chromasync technology supports three basic data operation modes for use with ColorGraze MX4 Powercore: 4-to-4, 3-to-4, and 3-to-3.

- **4-to-4 Configuration**

The 4-to-4 configuration works with newer controllers that deliver four channels of control data to four-channel LED luminaires. This is the default configuration for MX4 LED luminaires.

- **3-to-4 Configuration**

The 3-to-4 configuration works with controllers that employ three output data channels. ColorGraze MX4 Powercore maps three channels of control data to all four LED channels.

- **3-to-3 Configuration**

The 3-to-3 configuration allows legacy RGB light shows to be carried over to four-channel light luminaires; however, the fourth channel (White or Amber) is ignored. Therefore, this configuration does not utilize the full color palette available on the ColorGraze MX4 Powercore.

Aim and Lock the Luminaires

Make sure power is ON before aiming luminaires.

Rotate the luminaires to achieve the optimal angle for light output. For consistent position control, use the indicators on the side of each hinge knuckle as reference.

For fine horizontal adjustment, you can change the position of the hinge mounting block located on the side of each luminaire. Loosen the set screw with a 2.5 mm hex key, slide the mounting block to the desired position, then tighten the set screw.

Once satisfied with luminaire angles and positioning, use a 2 mm hex key wrench to tighten the hinge position set screws and lock each hinge.

⚠ Do not look directly into a luminaire when aiming and locking.

⚠ The hinge position set screws have factory applied thread lock. Confirm the luminaire angle and positioning before locking each hinge.

Attach Glare Shields (Optional)

Glare Shields, in 305 mm (1 ft), 610 mm (2 ft), 914 mm (3 ft), and 1.2 m (4 ft) lengths, can be inserted in the grooves in the ColorGraz MX4 Powercore housing. Glare Shields block unwanted spill light, and can shield the light sources from being directly visible in certain mounting situations.

1. Insert the Glare Shield's triangular tab in the outer groove on the side of the ColorGraz MX4 Powercore housing.
2. Using a hex wrench, tighten the locking screws to hold the Glare Shield in place.

3. (Optional) Attach a tether to the knockout in the Glare Shield, and affix the tether to a secure anchor point.
4. Using a small screwdriver, hand-tighten all set screws. Using a 1.5 mm hex wrench, torque the set screws to approximately 4 kgf/cm (3.5 in-lbs) to hold the Glare Shield in place.
